How Do You Learn? — An Interactive Learning & Quantum Computing Survey

67 responses

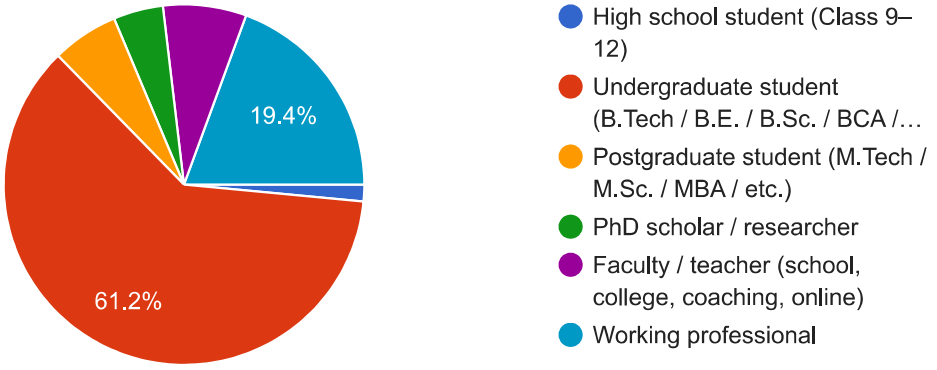

Publish analytics

SECTION 1 -- About You

Q1. Which describes you right now?

Copy chart

67 responses

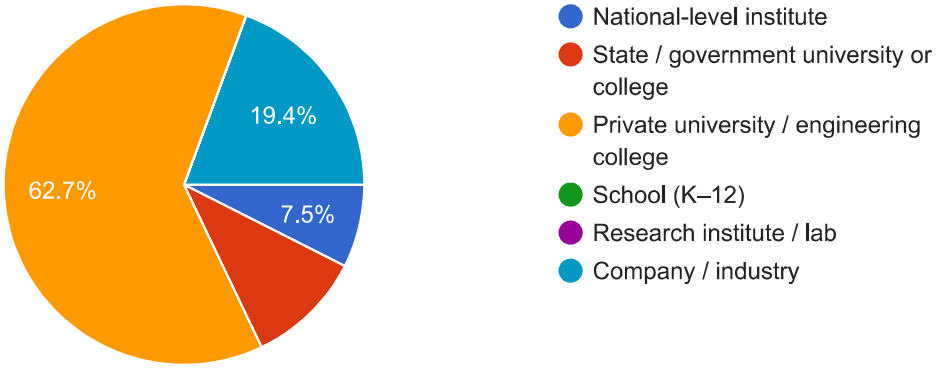

Q2. Your institution type

Copy chart

Students: your college/school. Professionals: your employer.

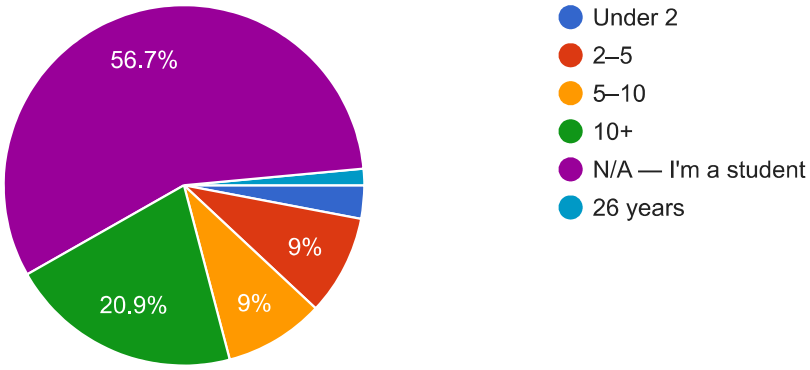

67 responses

Q3. If you're a working professional or faculty — years of experience

Copy chart

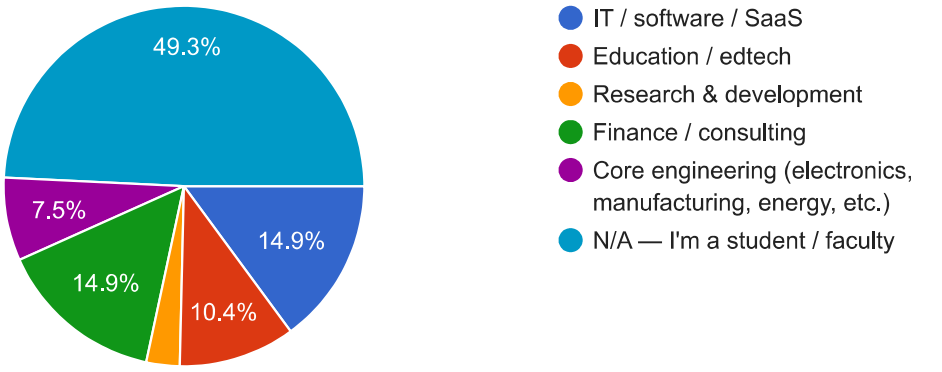

67 responses

Q4. If you're a working professional — your sector

Copy chart

67 responses

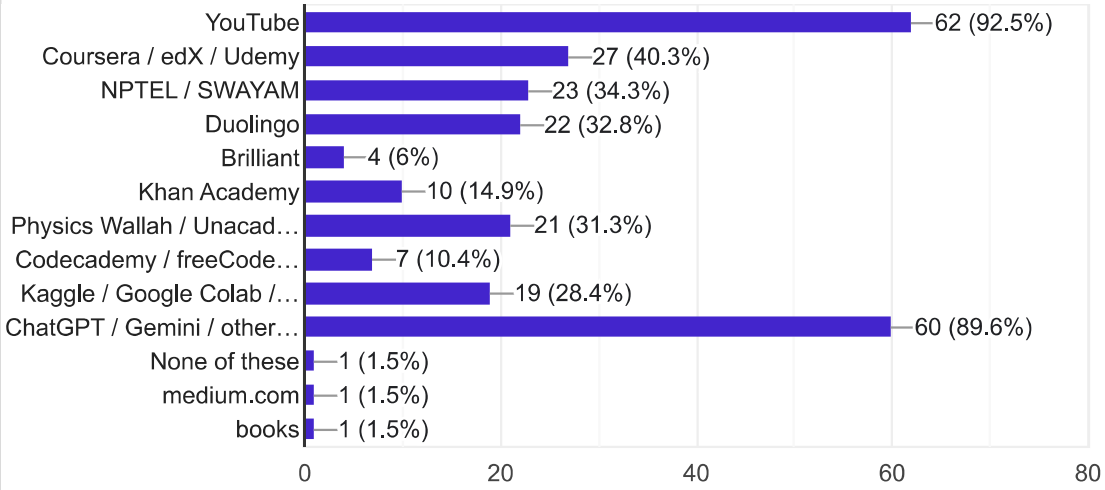

Section 2 -- How you learn

Q5. Which of these have you actually used to learn something?

Copy chart

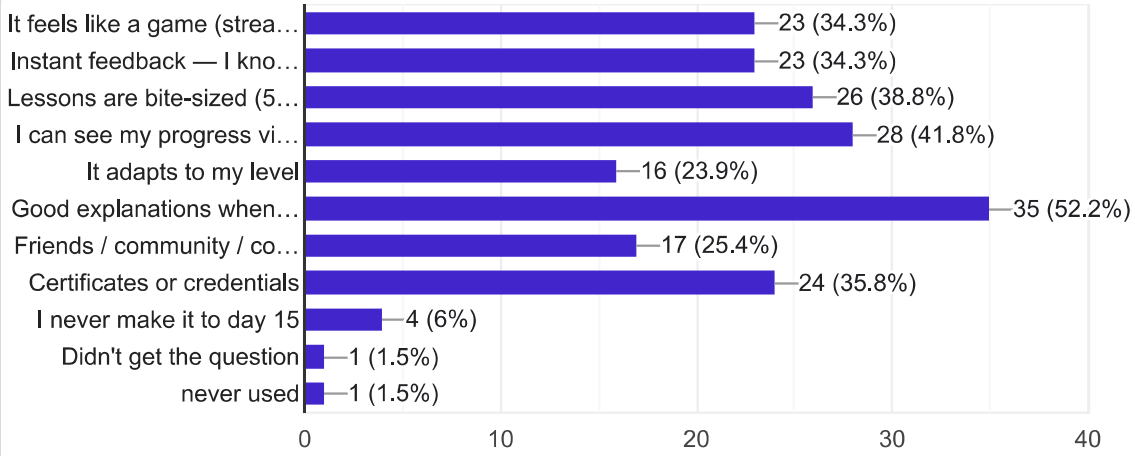

67 responses

Q6. Be honest — what makes you open a learning app again on day 15?

Copy chart

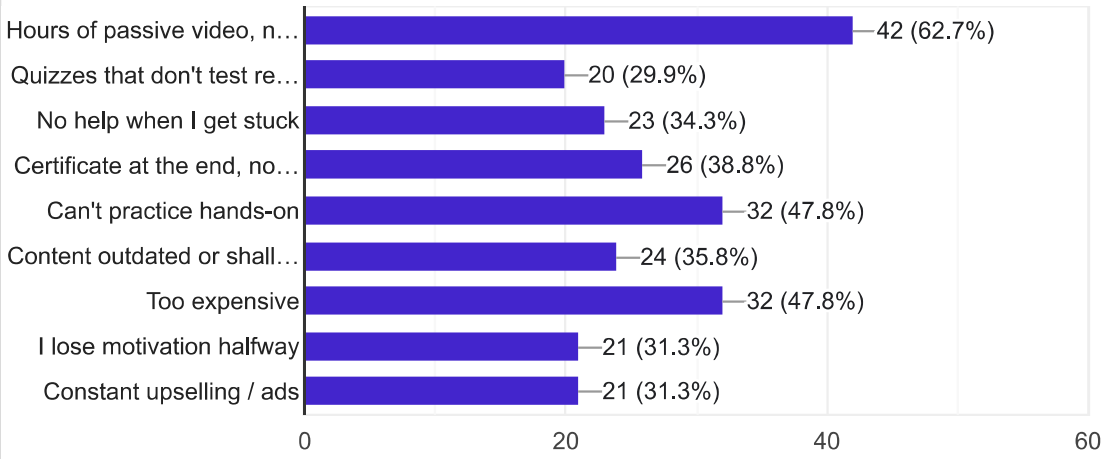

67 responses

Q7. What ruins an online course for you?

Copy chart

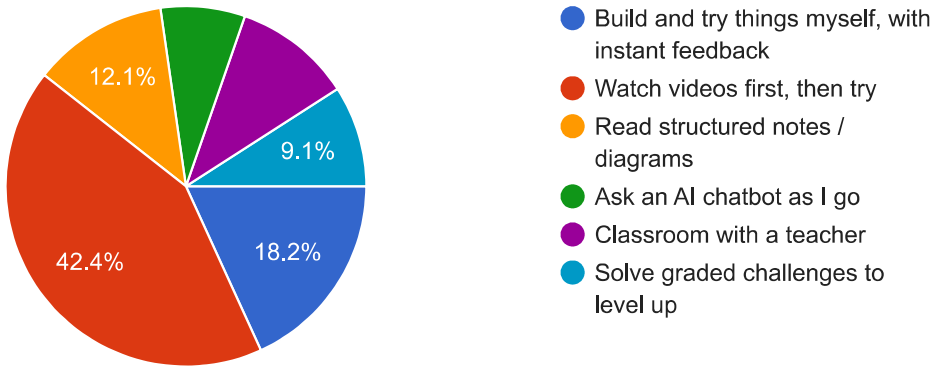

67 responses

Q8. How do you prefer learning a genuinely hard technical topic?

Copy chart

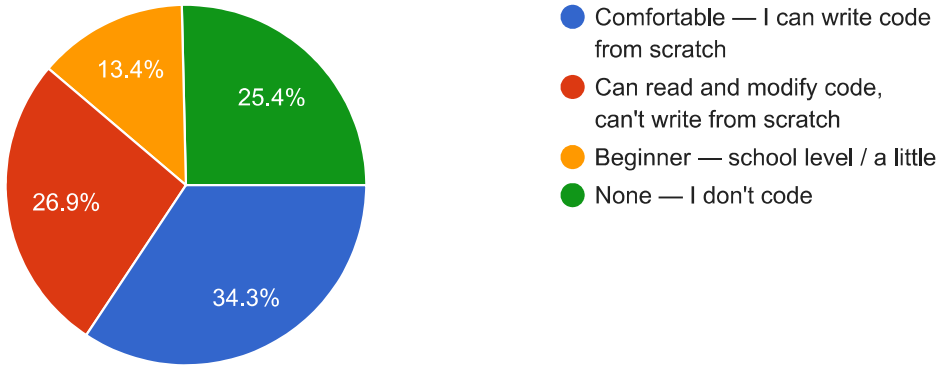

66 responses

Q9. Your comfort with programming

Copy chart

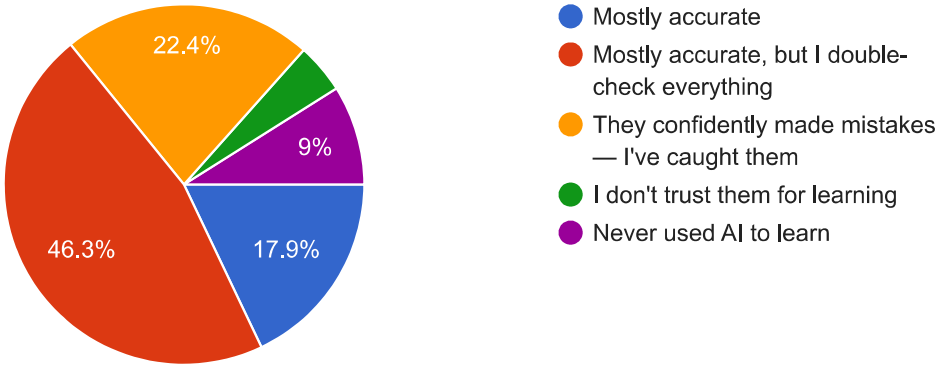

67 responses

Q10. If you've used AI chatbots to learn something technical — how trustworthy were they?

Copy chart

67 responses

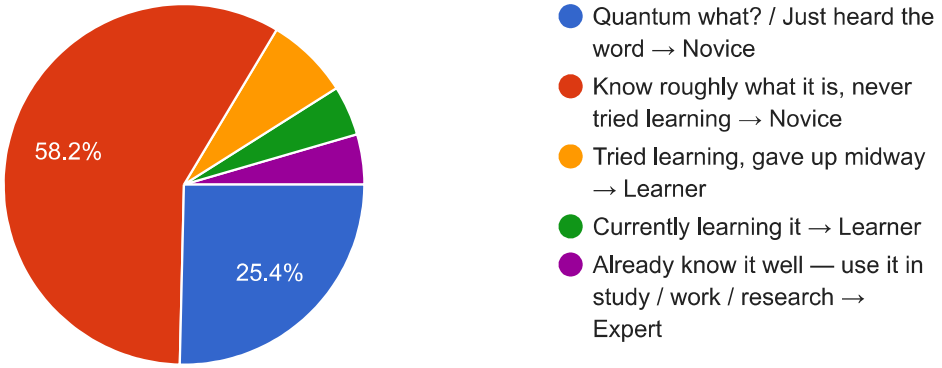

Section 3 -- Quick Check: Quantum

Q11. Which one describes you with quantum computing?

Copy chart

67 responses

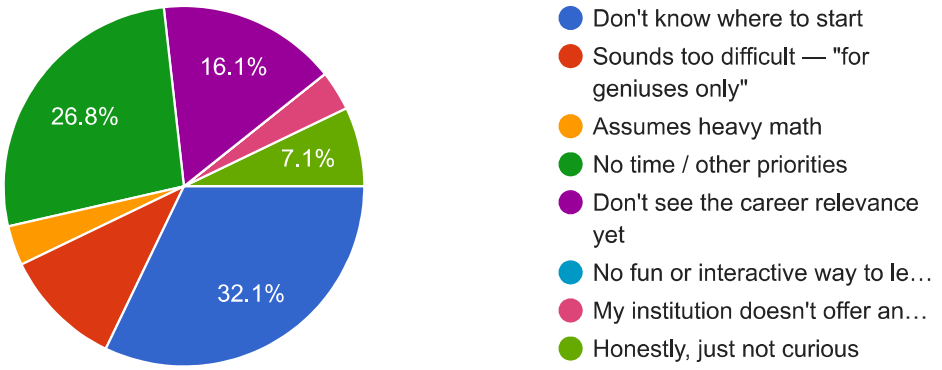

NOVICE SECTION

Q12. What's kept you from exploring quantum computing so far?

Copy chart

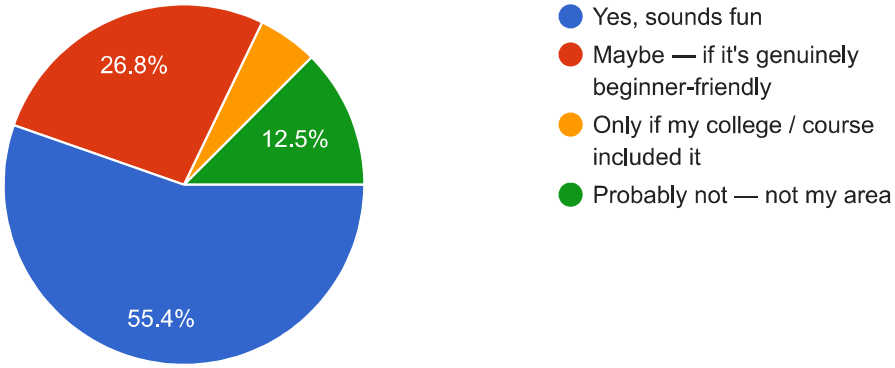

56 responses

Q13. If a platform existed where you drag-and-drop quantum gates in your browser and see results instantly — no math needed, nothing to install, works on any laptop — would you try it?

Copy chart

56 responses

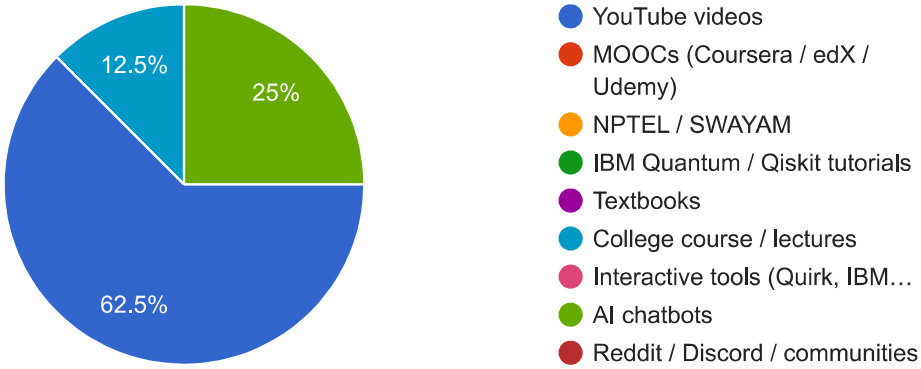

LEARNER SECTION

Q14. What have you used so far to learn quantum computing?

Copy chart

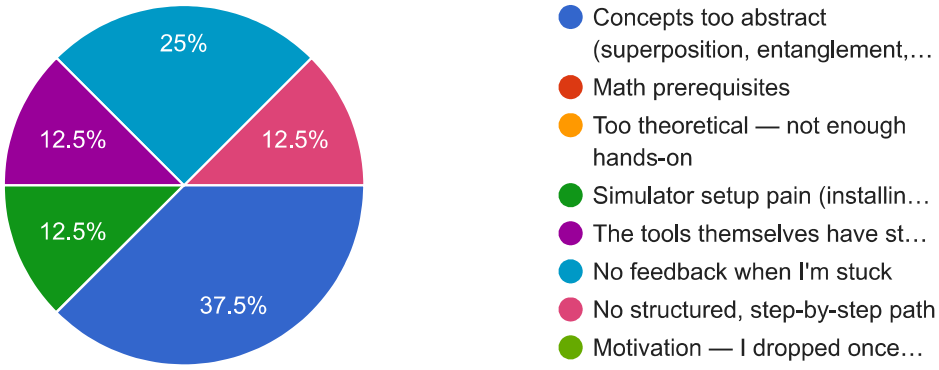

8 responses

Q15. What's been hardest?

Copy chart

8 responses

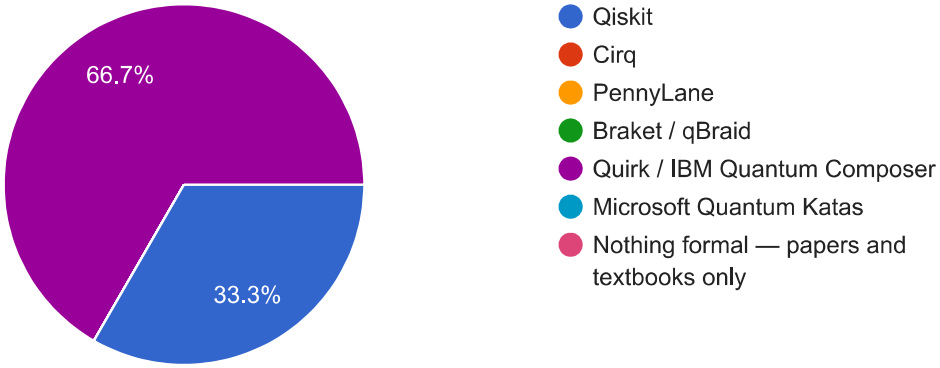

EXPERT SECTION

Q16. Tools you've actually used

Copy chart

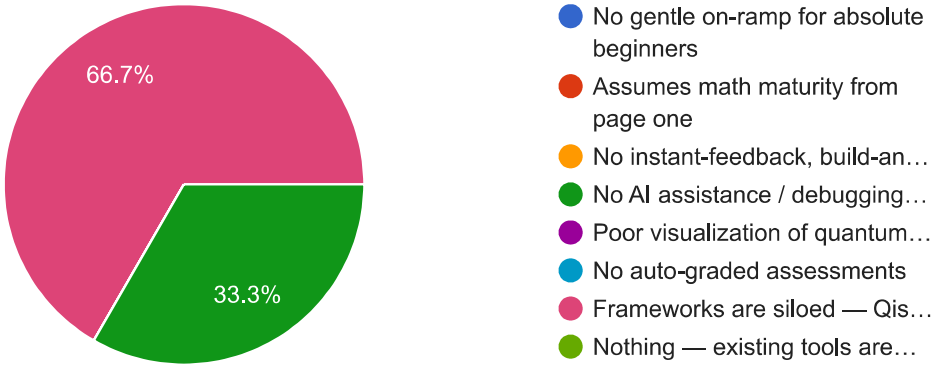

3 responses

Q18. What's missing in existing quantum learning tools?

Copy chart

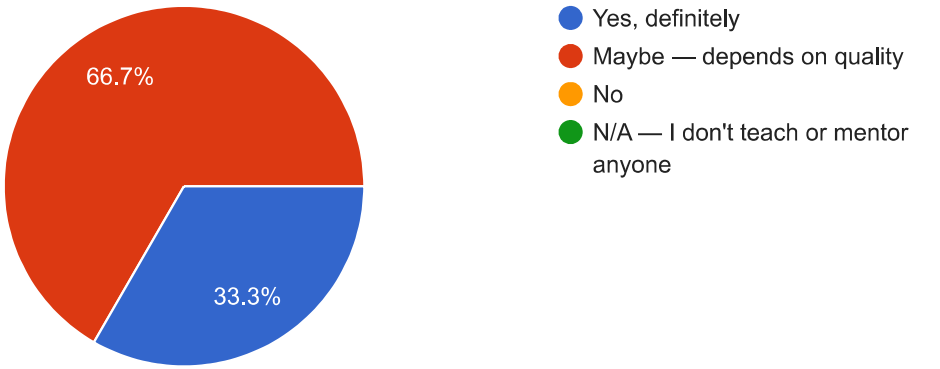

3 responses

Q19. Would you recommend an interactive platform like this to students you teach or mentor?

Copy chart

3 responses

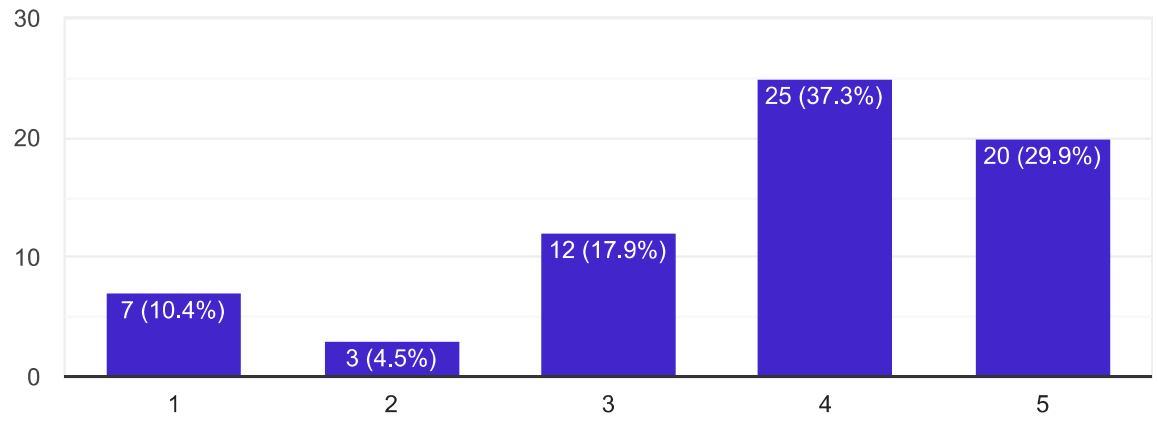

FINAL

Q20. A browser-based platform to learn quantum computing the Duolingo way — interactive, instant feedback, AI tutor. How interested are you?

Copy chart

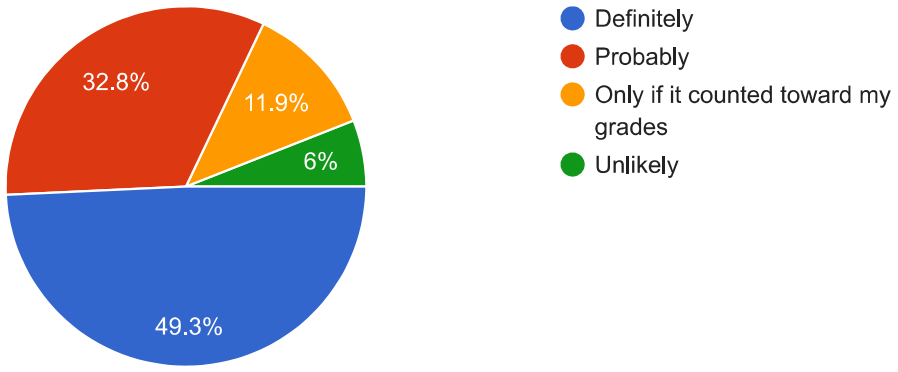

67 responses

Q21. If your institution gave you access to this platform, how likely would you be to use it?

Copy chart

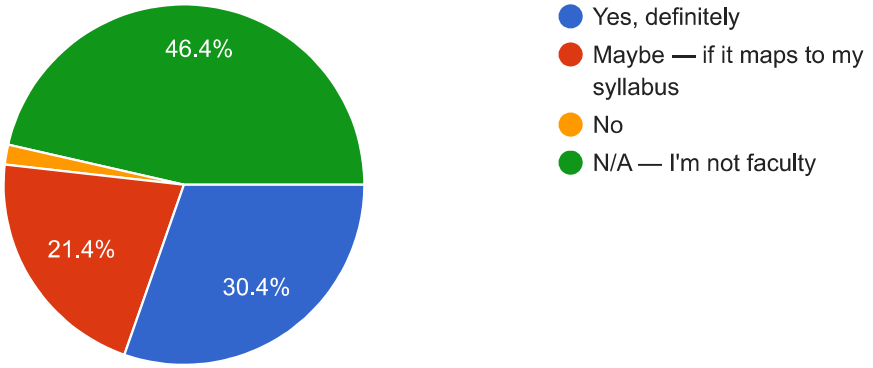

67 responses

Q22. Faculty only: if this platform had auto-graded quantum labs and a dashboard showing exactly where each student is stuck, would you use it in a course or elective?

Copy chart

56 responses

Q23. Last one — in a line or two: what would actually make you try (or keep) learning quantum computing? Please add your feedback

67 responses

.

Nothing

-

Intrest

No

Many more

If it is easy to understand

Like to fuck around and find out

It's intresting for me.

Not sure

Interest in this subject

Na

I would continue learning quantum computing provided I can implement it's functions on simulations.

Knowing that it has value in real life

If I could see strong industry opportunities in that area like there are for cloud computing or vlsi I might, but now it seems quite difficult to learn for someone with no prior knowledge.

If it can be precisely relatable to the real time problems that can be effectively solved using Quantum computing. This will develop a very good interest to learn Quantum computing

If the course is interactive and has hands on experience

By making it intresting and by aligning learning output with my needs

To gain insights on emerging technologies

The ambition of learning new things through out the journey

I have loved how brilliant works. A good learning platform makes the job easier! Motivates you to come back daily and learn! So even quantum can be learned if there is good platform to reduce the friction of learning it at first!

if learning it genuinely help me to achieve my long-term goal

none

If there is a career

Presentable video and interactive session’s

So far has not thought about the role of quantum computing to my domain. But surely if required for my domain then will explore the field.

I have No Idea

I want to learn new things...

Nothing

No idea

Hands-on projects, simple explanations, and seeing real-world applications would definitely make me more interested in learning quantum computing.

Hands on experience

Future prospects look bright

interactive session

If it’s part of my job

New concept and always curious to explore

Definitely beneficial

Relevance in the future of computing.

Like to keep learning

If quantum computing helps me in my focused interest.

It seems very interesting to me, would like to learn

competitive environment

Yes I would Love to try

No idea

If it benefits my career would surely give it a go

NA

make it with more easier level of understanding for novice learners and good for advanced learning

If it helps me understand and visualize,what exactly is the magnitude of what I'm learning and understanding in real world

if i could implement it in field of electronics

Step by step learning

Need and use the application whenever required

If it is taught in a simple and intuitive way

Beginner friendly and more ivolvement of hand on hand project

Now a days it's a well known concept and new technology

Explain how better it is from the normal, why should I switch to something else when I have something, where I can give my best.

Interesting facts and update about it's progress and need in future

Keep learning

Clarity in concepts and explanations

If it would be interesting.

Just to learn

Interest

Simple basic terms first to understand this diffusion topic

Curiosity to learn!

We'd love to hear your thoughts. If you have any suggestions, feedback, or ideas that could help us improve the platform, please share them below.

Sekho

Don't know anything abt this concept/field so no comments

Kindly meet me in lab 313, SFIT

Naah ig it's all good

A

If it had a clear roadmap explaining how this skill is useful from the competitive industry's perspective and the course is somewhat beginner friendly,that would help a lot.

Elaborative description can be added for quantum technology and it's probable pros cons etc.

none

Give examples using AI as if the users is working on the same, which is more interactive

After using same can be confirmed

no

Consider evaluating emerging quantum computing technologies for future platform innovation, performance optimization, and advanced analytical capabilities.

Would love to see it take shape. All the best. Cant give any suggestions until we see it.

No, all good..

n/a

Noo

NA

No comments

N/A

Keep the site simple and interactive. More of knowledge and time spending learning than just useless timepass.
